LUXRIOT EVO TRIAL

Intelligence

Powerfully smart, Evo Trial supports almost any camera, and has a wide range of advanced features and a long list of add-ons, enabling more efficient video management than you will ever have encountered before.

Complete ecosystem

The software is packed with essential and advanced features to allow you to make the most of your video management system, regardless of how extensive it is.

Intuitive and user-friendly

The meticulously designed interface helps users to quickly understand the whole configuration process and start using the software.

Time-tested performance

The quality and stability of the software's core has been proved, and is backed up by Luxriot's fifteen years of experience and continuous development.

Enterprise upgrade ready

With its central server hierarchy, failover, archive replication and many more improvements, it's the ideal system for large-scale solutions.

Highlights

Evo Trials's key integral elements work together to create a cohesive and up-to-date piece of video management software. When it comes to security, we know that every detail is important, and everything is taken care of.

64-bit core

Using the full power of hardware for efficient software architecture.

Powerful EVA analytics tools

New modules for advanced video analytics, along with Crosslink 1 interactive browser technology.

Event and Action Manager

Automated video surveillance process using the Alarm and Action manager.

Luxriot Evo Trial features

Delivering outstanding-quality performance, Evo video management system supports over 8000 cameras from major vendors and is ideal for learning about Evo products without compromise and at your actual surveillance network.

LUXRIOT EVO TRIAL

Mobile Applications

Use your mobile device to access live and archived streams. Use PTZ presets, control two-way audio, or use a mobile phone camera to stream video directly to your server.

Web access

Get permanent access to live streaming and archive video through your web browser

Live Podcast

Use a streaming server to send a livecast of your video to a website or to YouTube.

EVA Video Analysis

Exploit the full potential of your video management system with video content analysis. Not only does this improve the functionality of your surveillance system (the ability to analyse large amounts of data to determine a specific pattern for the exact task you are working on), it also enhances security and safety and can be useful in many other areas of your enterprise, like HR and marketing.

Interactive + GEO Maps

Complete overview of all areas where cameras are installed, providing immediate visual verification. All the alerts are integrated with the maps and can be set up so that they can be viewed on the overview as well — meaning you are able to immediately specify the location of the alarm event.

Advanced Event and Action Manager

Specify the desired outcome of your video surveillance system's operation. Determine how the software reacts to any event caught on camera and how it learns to process the reactions automatically. Send emails, activate DI/DO, interact with any other software or simply bring the attention of the operator to the camera that requires immediate action from them. The functionality is used in order to get rid of false alarms and to improve the efficiency of your surveillance system, and can be used not only for single events, but also for sets of sequenced events.

Edge Recording

Synchronize all your data with IP device storage. By doing this, your data will still be recorded by all cameras even if network connection is lost to any of them. Data recorded during this period will be transferred in full to your server as soon as network connection is re-established.

Alarm Acknowledgment

Ensure no events are overlooked by the operator. All the alarms must be confirmed by the operator by automatically generating a bookmark of the event in the archive. The operator can make entries in the journal to allow tracking of actions performed with regard to the events.

To all the benefits of the high-quality and reliable Luxriot VMS core, Evo Trial adds an intuitive user interface and better functionality. In addition to advanced features, it can use virtually any stream resolution, as well as having no software limitations on remote connections from client and mobile applications.

Evo Mobile

Take advantage of this easy-to-use app for Android and iOS to access live and recorded video streams from Luxriot Evo Server with your smartphone or tablet. Use for free, no matter where you are.
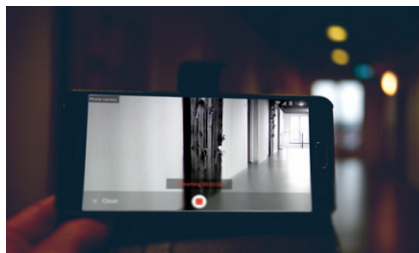

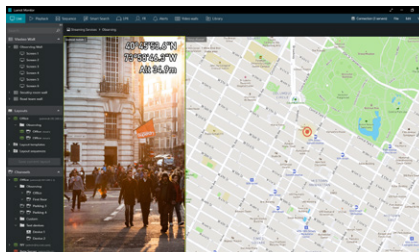

With Evo Mobile you are always in control of the situation. Connect using 3G, 4G, 5G or WiFi to livestream from one or multiple cameras, or to play back recorded video. Set up multiple servers, freely adjust stream quality to match your bandwidth and share snapshots in the blink of an eye.

New and exciting features include geotagging, stacking, a panic button, push event notifications, edge recording and live streaming from phone's camera, not to mention support of widgets an Schomecast.

Download Luxriot Evo Mobile application for Android or iOS for free.

The livestreaming function coupled with in-app edge recording makes the app especially useful for law enforcement, allowing users to use smartphones as body-worn cameras.

You can use phones running Luxriot Evo Mobile as dashcams for fleet vehicles (trucks, delivery cars, taxis, public transport) for a simple and cost-effective vehicle tracking solution.

The GPS data of your mobile device get attached to the video stream.

Once started, the video, audio and geolocation info will keep on streaming until you stop it.
